Processing the data of comparative measurements by  
the method of triple control enables us to determine  
the magnitude of the error of measurement by the dif-  
ferent types of radiosonde. Systematic errors in the  
determination of the heights of the isobaric surfaces  
by means of the U. S. S. R. Radiosonde type R3-049  
(P3-049) may be almost completely eliminated and ran-

The observations refer to the period from May 5 to 12,  
1949, under conditions when the sun never set. A con-  
nection is revealed between the increase in the values  
of the vertical velocities of air movements and the in-
